## INTRODUCTION

The Street Index files are a series of data files displaying the street names alphabetically and their corresponding Electoral District number, Census Tract number (where applicable), Enumeration Area number and municipality name. Note that the civic address ranges are within an enumeration area and for most streets within an enumeration area two address ranges are given i.e. one range being for odd numbers and the other for even numbers. These ranges represent each side of the street, an exception is when a street has addresses only on one side, in this case the file will give only one range.

The Street Index files cover 59 urban centres, 32 of which are census tracted. For the latter, an update was performed as of June 1, 1971 (32 centres having census tracts). As for the remaining 27 centres, they remain up-to-date as of 1969. All 59 centres have been merged on one reel of magnetic tape. There has been an agglomeration (city) code assigned to each of the 59 centres and this code is tagged to each individual record. Therefore, it is quite a simple process to extract any centre (s) from the file via the agglomeration code. These codes are found on the following page.

## FIELD DESCRIPTION

- | <u>Field</u>                  | <u>Description</u>  |
|-------------------------------|---|
| 1. ELECTORAL DISTRICT NUMBER: | this field is always numeric.   |
| 2. ENUMERATION AREA NUMBER:   | this field is always numeric.   |
| 3. SPECIAL ENUMERATION AREA:  | indicator can be an *, blank, or a < .<br>* = special EA such as a school, hospital, military establishment, convent, large hotel, etc.<br>< = an apartment which is broken into more than one Enumeration Area, note that with a < , it is possible to have two entries for the same address.  |
| 4. CENSUS TRACT:              | is an area within an urban municipality established for statistical purposes by Statistics Canada, in co-operation with the local authority. It is usually a homogeneous area from the social and economic points of view, which is used for intra-urban studies. This field is always numeric. |
| 5. AGGLOMERATION CODE:        | is a two digit code used by the Street Index Unit to up-date and extract agglomerations. This field is always numeric.  |
| 6. MUNICIPALITY ABBREVIATION: | used to shorten the municipality name, as per attached sheet. This field can be alphabetic or blank.  |
| 7. MUNICIPALITY CODE:         | is a four digit code given to each municipality, it is always numeric, (Standard Geographical Classification Code).   |
| 8. STREET NAME:               |   |
| 9. STREET TYPE:               | types accepted by the system, is blank or as per attached sheet.  |
| 10. STREET DIRECTION:         | is blank, or N, S, E, W, NW, NE, SW, SE, etc.   |
| 11. ODD EVEN INDICATOR:       | is a number, either 1 or 2 to indicate whether the address range is odd or even. Note that ranges which are all zeros are considered odd or 1.  |
| 12. Blank (space)             |   |
| 13. RANGE FROM:               | is the low number in the civic address range. This field is always numeric.   |
| 14. Blank (space)             |   |

15. RANGE TO: is the high number in the civic address range. This field is always numeric.
16. RECORD SERIAL NUMBER: for updating purposes only.
17. Blank (space)
18. ELECTORAL DISTRICT NAME: (sometimes abbreviated.)
19. EDIT FLAG: for editing purposes only.

## STREET TYPES

## NEW STREET INDEX SYSTEM MASTER FILE

### NOTE:

All cities of the old Street Index will eventually be up-dated. As of now, the only cities that are being up-dated are cities with Census Tracts. A small percentage of these cities are not up to date as of now. The up-dated cities are the ones mentioned in this pamphlet.
